

Dashboard Quality Test Specification

SECTION A - Global Inputs Verification

Setting | Status | Issue | Quality Notes

Setting = The required dashboard global setting being validated. Examples include framework version, date format standards, report configuration values, template control settings, or other governed dashboard-level inputs. Data comes directly from the Dashboard Global Inputs configuration area.

Status = Result of the validation for the setting. Expected values include PASS, WARNING, FAIL, CRITICAL, NOT RUN, or NOT AVAILABLE. Generated by the validation logic.

Issue = Specific problem identified for the setting. Examples include Missing Value, Blank Value, Invalid Value, Duplicate Setting, or Configuration Conflict. Blank if no issue exists.

Quality Notes = Detailed explanation of the validation result, including expected value, actual value, corrective action, or additional context.

SECTION B - Sheet Definitions Verification

Sheet | Status | Issue | Quality Notes

Sheet = The governed sheet definition being validated. Examples include Dashboard Quality Report, Framework Timing Report, Monthly Change Report, Master List, Care Plan Due, or other dashboard-controlled sheet definitions. Data comes from the Dashboard Sheet Definitions table.

Status = Result of the validation for the sheet definition.

Issue = Specific problem identified with the sheet definition. Examples include Missing Definition, Invalid Sheet Type, Missing Template Association, Missing Configuration, or Duplicate Definition.

Quality Notes = Additional explanation regarding the sheet definition validation result.

SECTION C - Sheet Headers Verification

Header | Status | Issue | Quality Notes

Header = The dashboard header definition being validated. Data comes from the Dashboard Header Definitions table.

Status = Result of validating the header definition.

Issue = Specific problem identified. Examples include Missing Header, Blank Header, Duplicate Header, Invalid Header Name, or Required Header Not Found.

Quality Notes = Additional details regarding the header validation.

SECTION D - Column Definitions Verification

Column | Status | Issue | Quality Notes

Column = The dashboard column definition being validated. Data comes from the Dashboard Column Definitions table.

Status = Result of validating the column definition.

Issue = Specific problem identified. Examples include Missing Width, Missing Alignment, Missing Format, Missing Visibility Setting, Invalid Width, or Invalid Format.

Quality Notes = Additional details regarding the column configuration issue or validation result.

SECTION E - Sheet Behavior Verification

Behavior | Status | Issue | Quality Notes

Behavior = The sheet behavior setting being validated. Examples include frozen rows, filters, title rows, alternating colors, hidden templates, protections, grouping, or governed formatting behaviors. Data comes from Dashboard Sheet Behavior configuration.

Status = Result of validating the behavior setting.

Issue = Specific problem identified. Examples include Missing Behavior, Invalid Setting, Missing Freeze Configuration, Missing Filter, or Missing Protection.

Quality Notes = Additional information regarding the behavior validation result.

SECTION F - Dashboard Audit

Area | Item | Status | Quality Notes

Area = The major dashboard audit category being reviewed. Examples include Dashboard Configuration, Dashboard Structure, Dashboard Integrity, Dashboard Accessibility, Dashboard Definitions, or Dashboard Controls.

Item = The specific audit item being validated within the Area. Examples include Global Inputs Loaded, Header Definitions Loaded, Required Anchors Present, Dashboard Sheet Found, or Configuration Readable.

Status = Result of the audit item validation.

Quality Notes = Detailed explanation of the audit result including findings, observations, warnings, or recommendations.

SECTION G - Date Format Integrity Validation

Column Header | Date Format Present | Status | Quality Notes

Column Header = The governed date column being validated. Examples include Date of Birth, Enrollment Date, Last Care Plan Date, Next Care Plan Due Date, Capitation Date, or other governed date fields. Data comes from Dashboard Header Definitions and Template Validation.

Date Format Present = The actual date format detected on the template column. Examples include mm/dd/yyyy, m/d/yyyy, General, Text, or Missing Format.

Status = Result of the date validation. Determines whether the column is displaying and storing dates correctly.

Quality Notes = Details of the validation including detected format, sample values tested, serial-number conversion findings, General-format findings, or corrective recommendations.

SECTION H - Signoff

Audit Item | Status | Issue | Quality Notes

Audit Item = The final signoff requirement being evaluated. Examples include Dashboard Quality Startup Complete, Template Validation Complete, Workflow Validation Complete, Framework Timing Complete, Critical Findings Review, and Release Readiness.

Status = Result of the signoff validation.

Issue = Any condition preventing successful signoff. Examples include Validation Not Run, Critical Failures Present, Missing Templates, Missing System Sheets, or Outstanding Errors.

Quality Notes = Additional explanation of signoff readiness or required corrective actions.

SECTION I - Summary

Health Check | Status | Issue | Quality Notes

Health Check = The summary metric being reported. Examples include Total Validations, PASS Count, WARNING Count, FAIL Count, CRITICAL Count, System Sheet Status, Template Status, and Overall Health.

Status = Overall status associated with the Health Check metric.

Issue = Summary issue affecting the metric. Examples include Failed Validations Present, Critical Findings Present, Missing Reports, or Validation Incomplete.

Quality Notes = Expanded explanation of the summary metric and supporting details.

SECTION J - Performance Summary

Process | Runtime | Status | Quality Notes

Process = The major framework process being timed. Examples include Set Up System Sheets, Create / Refresh All Templates, Dashboard Quality Start Up, Dashboard Quality Validate Templates, Dashboard Quality Workflow, and Rebuild Dashboard Defaults. Data comes from the Framework Timing Report.

Runtime = Total elapsed runtime for the process measured in seconds. Data comes directly from Framework Timing calculations.

Status = Runtime severity classification. Examples include PASS, WARNING, SLOW, BOTTLENECK, or CRITICAL.

Quality Notes = Additional performance findings, bottleneck descriptions, optimization recommendations, or runtime observations.

SECTION K - Master List Health Check

Validation Item | Status | Issue | Quality Notes

Validation Item = The Master List governance validation being performed. Examples include Required Headers Present, Primary PMR Row Present, Required Fields Present, Duplicate PMR Check, or Current Month Validation.

Status = Result of the validation.

Issue = Specific issue identified during validation.

Quality Notes = Detailed explanation of the validation result and any required corrective action.

SECTION L - Care Plan Synchronization Diagnostics

Sync Check | Status | Issue | Quality Notes

Sync Check = The synchronization validation being performed. Examples include Master List Month Match, Care Plan Due Match, Unlocked Care Plan Match, PMR Alignment, and Sync Field Validation.

Status = Result of the synchronization check.

Issue = Specific synchronization problem identified.

Quality Notes = Additional diagnostic information explaining the synchronization result.

SECTION M - Workflow & Synchronization Verification

Workflow Check | Status | Issue | Quality Notes

Workflow Check = The workflow process being validated. Examples include Contact Processing, Phone Split Processing, Address Combine Processing, Language Processing, Notes Summary Generation, Banner Summary Generation, Care Plan Synchronization, and Primary PMR Assignment.

Status = Result of the workflow validation.

Issue = Specific workflow problem identified.

Quality Notes = Additional information regarding workflow execution, validation findings, or corrective recommendations.
