

Move assign primary row to Format Raw Data and when syncing Banners only use Primary Row for data.

Make sure dates on sheets are formatted mm.yy

Notes -- should contain, Additional Important Information, Contact Summary, Banner Summary, Create Master List didn't work

Copy

1. Critical issues

1.1 Create Master List fails because Demo P naming is inconsistent

The screenshot error is consistent with the code path: `createMasterList()` looks for a monthly dated Demo P sheet via `getCurrentDemoPSheet_(monthParts)`. If not found, it stops with: "Demo P sheet for that month was not found. Run Process Demo P first."

The lookup expects a monthly sheet by prefix/date. `getCurrentDemoPSheet_()` calls `getMonthlySheetByPrefixAndDate_(ss, DEMO_P_PREFIX, monthParts.firstDay, monthParts.lastDay)`.

But `processDemoP()` currently renames the processed sheet to plain Demo P, not a dated monthly name.

This is the likely direct cause of the screenshot failure: the visible sheet tab is Demo P, while Create Master List expects something like the dated Demo P monthly naming pattern.

Required remediation: Process Demo P should finalize the sheet name using the same monthly naming convention that `getCurrentDemoPSheet_()` expects, or `getCurrentDemoPSheet_()` must also accept the current plain Demo P sheet as a valid current-month working sheet.

1.2 Banner sync does not restrict updates to Primary PMR Row

The user instruction says: “when syncing Banners only use Primary Row for data.”

Currently `formatRawData()` calls `processRawDataApprovedSyncColumns_()` before `syncRawDataBannerColumns_()`, so Primary PMR Row is assigned before Banner sync. However, `syncRawDataBannerColumns_()` iterates every Raw Data output row and updates matching rows by composite key. It does not check Primary PMR Row === Yes before applying banner values.

Required remediation: Add a Primary PMR Row check inside `syncRawDataBannerColumns_()` so only primary rows receive Banners-sourced values.

1.3 Primary row assignment is in Format Raw Data, but the architecture is fragile

Primary row assignment is currently performed by `processRawDataApprovedSyncColumns_()` through `markPrimaryPMRRowsForSequentialData_(data)`.

That sat

isfies the “move assign primary row to Format Raw Data” requirement in principle, because `formatRawData()` calls that function immediately after Raw Data output creation. But the current primary logic is sequential-row based, meaning it assumes rows are already grouped/sorted by participant PMR. If the imported Raw Data is not grouped by PMR, multiple rows for the same PMR could be incorrectly marked as primary.

Required remediation: Replace or supplement `markPrimaryPMRRowsForSequentialData_()` with block-based PMR grouping, using the existing `assignPrimaryRowForBlock_()` logic.

1.4 Notes field order does not match requested order

User requested Notes should contain:

1. Additional Important Information
2. Contact Summary
3. Banner Summary

Current `combineNotesSummaryData_()` uses this order:

1. Banner Summary
2. Contact - Summary
3. Additional Important Information

Required remediation: Reorder sourceHeaders to:

[
"Additional Important Information",

"Contact - Summary",
"Banner Summary"
]

1.5 Sheet date formatting does not consistently use mm.yy

The code defines `DATE_SHEET_FORMAT = "MM.yy"`.

Sheet naming patterns also use mm.yy, e.g. Demo P mm.yy, Raw Data mm.yy, Master List mm.yy.

But many visible sheet date cells are still formatted as m/d/yy, m/d/yyyy, or full timestamps, for example title date cells in output/template helpers.

Required remediation: Clarify whether “dates on sheets are formatted mm.yy” means:

- Sheet tab names only — already mostly true.
 - Visible title/date cells — not currently true and needs a formatting pass.
 - Dashboard/report timestamps — should probably remain full timestamp formats.
-

2. Performance bottlenecks

2.1 Raw Data / Banner sync can become expensive without primary-row filtering

Because `syncRawDataBannerColumns_()` currently scans and evaluates every output Raw Data row, large Raw Data sheets will pay unnecessary matching and write costs.

Filtering to Primary PMR Row first would reduce the number of rows updated and prevent unnecessary writes.

2.2 Demo P / Master List date formatting still uses sheet-level formatting calls

Several date-format operations call `setNumberFormat()` over ranges. These are acceptable but can be slow on large templates/sheets.

The current speed work helped grid resizing, but visible date-format standardization to mm.yy could add more formatting overhead if applied naïvely.

Recommendation: If enforcing mm.yy, do it only on known title/date cells, not every date-like data column.

2.3 Dashboard/template reports could not be reviewed from requested PDFs

The requested PDFs were not present in the workspace:

- Report/v1.6.13 - Dashboard Quality Report.pdf
- Report/v1.6.13 - Framework Timing Report.pdf
- Report/v1.6.13 - Google Apps Scripts Executions.pdf

The local search found no Report/ files; only the full script and a .codexignore spec artifact were available.

Command used:

```
✓ find Report -maxdepth 2 -type f -print 2>/dev/null || true
✓ find . -maxdepth 3 -type f | sed 's#^./###' | rg -i "v1\\.6\\.13|Dashboard Quality
Report|Framework Timing Report|Google Apps Scripts Executions|Report"
```

3. Architecture issues

3.1 Demo P has two incompatible identities: working sheet vs monthly sheet

Process Demo P maintains the sheet as Demo P.

But downstream workflows expect dated monthly Demo P sheets.

This mismatch affects:

- Create Master List
- Monthly Change
- Previous/current month comparisons
- Sheet organization/indexing

Architecture decision needed: Either Demo P is always a dated monthly output sheet, or it is a working sheet and downstream lookups must support that working-sheet model.

3.2 Raw Data processing mixes output creation, enrichment, sync, deletion, and workflow state

formatRawData() currently:

1. Reads source Raw Data.
2. Creates output from template.
3. Assigns Primary PMR Row.
4. Syncs Banners.
5. Deletes source sheet.
6. Writes timing/logging.

This is operationally convenient but tightly coupled. It makes it harder to isolate failures like “Banner sync updated non-primary rows” or “source sheet deletion happened before validation.”

Recommendation: Split into clearly named internal stages:

- buildRawDataOutputFromSource_
- assignRawDataPrimaryRows_
- syncPrimaryRawDataRowsFromBanners_
- finalizeRawDataSourceSheet_

3.3 Notes assembly is business-rule sensitive but hard-coded

combineNotesSummaryData_() hard-codes the source fields and order.

Because Notes ordering is a user-facing rule, it should be centrally defined as a constant or dashboard-driven list to prevent future drift.

4. Prioritized remediation plan

Priority 1 — Fix Create Master List blocker

Problem: Create Master List cannot find current Demo P because Demo P is named plain Demo P, while lookup expects monthly Demo P.

Fix options:

1. Preferred: Rename Demo P output to monthly format during Process Demo P.
2. Safer fallback: Update getCurrentDemoPSheet_() to fall back to the plain Demo P sheet if the monthly sheet is missing.

Relevant code:

setUniqueSheetName_(sheet, DEMO_P_PREFIX) currently finalizes plain Demo P.
getCurrentDemoPSheet_() expects monthly lookup.

Priority 2 — Restrict Raw Data Banner sync to Primary PMR Row only

Problem: Banner sync updates all matching rows.

Fix: In syncRawDataBannerColumns_(), locate Primary PMR Row and skip rows where it is not primary.

Relevant code:

syncRawDataBannerColumns_() currently applies Banners fields by composite key without primary-row filtering.

Priority 3 — Reorder Notes source fields

Problem: Current order is Banner Summary → Contact Summary → Additional Important Information.

Fix: Change order to Additional Important Information → Contact Summary → Banner Summary.

Relevant code:

combineNotesSummaryData_() source order is currently wrong for the requested rule.

Priority 4 — Standardize visible sheet date cells if required

Problem: Sheet names use MM.yy, but visible date cells often use m/d/yy or m/d/yyyy.

Fix: Define exactly which date cells should display mm.yy, then update title/date cell formatters only. Avoid applying mm.yy to actual date data columns that need full dates.

Relevant code:

DATE_SHEET_FORMAT = "MM.yy" exists.

Several output date cells still use non-mm.yy formats.

Priority 5 — Replace sequential primary marking with block-based primary marking

Problem: markPrimaryPMRRowsForSequentialData_() may be unsafe if Raw Data is not grouped by PMR.

Fix: Use PMR block grouping and assignPrimaryRowForBlock_() inside Raw Data primary row assignment.

Relevant code:

Raw Data primary assignment currently runs inside processRawDataApprovedSyncColumns_().

Commands used for this analysis

-  git branch --show-current
-  git status --short
-  find Report -maxdepth 2 -type f -print 2>/dev/null || true
-  find . -maxdepth 3 -type f | sed 's#^./###' | rg -i "v1\\.6\\.13|Dashboard Quality Report|Framework Timing Report|Google Apps Scripts Executions|Report"
-  rg -n "function
formatRawData\\(|processRawDataApprovedSyncColumns_|markPrimaryPMRRowsFor
SequentialData_|syncRawDataBannerColumns_|function
createMasterList\\(|getCurrentDemoPSheet_|DEMO_P_PREFIX|setUniqueSheetName_|
\\(sheet, DEMO_P_PREFIX|function
combineNotesSummaryData_|formatDateForSheetName_|MM\\.yy|mm\\.yy|setNumberF
ormat" Current_Production/v1.6.13_Full_Script.txt
-  nl -ba Current_Production/v1.6.13_Full_Script.txt | sed -n
'6494,6556p;7222,7245p;8050,8053p;8190,8240p;9988,10010p;10335,10435p;11043,11
068p;12648,12656p'

1.1 Demo P will now be an ongoing sheet and not a monthly sheet. Create Master List sheet using Demo P

1.2 and 1.3 makes sure the identify Primary PMR Row function is moved from Demo P to Raw Data and add Primary PMR Row column to Raw Data

1.4 - Notes on v1.6.13 only contained Banner Summary

1.5 CP Due Date, Unlocked CP, Raw Data and Disenrolled all show date as "04.01"

2.2 Date formatting within the sheet is good, it is the sheet titles with the error in format see 1.5

3.1 Will be a working sheet.
