

V1.9 Master List Framework Specification - Authoritative Knowledge Document

Purpose:

This document consolidates Master List Instructions, production business logic, column formatting standards, dashboard configuration standards, data source mappings, synchronization standards, processing rules, validation standards, QA standards, timing standards, template architecture standards, and single-file framework governance into one authoritative governing framework specification.

Source basis:

- Master List Instructions
- ML Non Merge 27.0 Mapping Documents
- Production Master List Script
- Dashboard Build Infrastructure
- Production Script Baseline v1.4.23
- Approved Business Logic v26.9.5
- Approved v27 Workflow Standards
- Dashboard Infrastructure v3.2.2
- QA Framework v3.4.2
- Approved Framework Governance Decisions through v1.4.23
- Consolidated Framework Addendum Updates

This document is the authoritative governing specification for the Master List Framework.

The specification defines:

- Architecture Standards
- Processing Standards
- Dashboard Standards
- Dashboard Quality Standards
- Template Standards
- Validation Standards
- QA Standards
- Timing Standards
- Synchronization Standards
- Primary PMR Standards
- Monthly Change Standards
- Master List Standards
- Care Plan Standards
- Banner Standards
- Demo P Standards
- Disenrollment Standards

- Performance Standards
- Testing Standards
- Protected Standards
- Column Configuration Standards
- Sheet Configuration Standards
- Data Source Mapping Standards
- Update Tracking Standards

All future framework development shall follow this specification.

If conflicts exist between:

- Production scripts
- Legacy framework documents
- Prior specifications
- Mapping documents
- Dashboard definitions

The Framework Specification shall be the authoritative source.

Appendix H – Required Release Package

Appendix I – Framework Decision Log

Appendix J – Current Production Architecture

Appendix K – Current Open Items

Appendix L – Revision History & Performance Findings

Master List Framework Specification v1.9

1. Executive Overview

The Master List Framework is the governing system for monthly Raw Data preservation, Demo P processing, Master List creation, Banner synchronization, Care Plan Due and Unlocked Care Plan synchronization, Monthly Change reporting, disenrollment tracking, dashboard-controlled templates, validation, timing, and QA reporting.

The framework has now moved from migration architecture into production stabilization architecture. The prior reference stack - Business Logic v26.9.5 with approved v27 workflows, Dashboard Infrastructure v3.2.2, and QA Framework v3.4.2 - remains preserved as architecture lineage. The current production baseline is v1.4.23.

The v1.9 specification is the active governing document for future development. Production Script v1.4.23 becomes the current executable source of truth. Historical scripts are retained for reference and troubleshooting, but they do not override the current framework specification or the current production script.

1.1 Framework Purpose

- Define the architecture standards for the Master List Framework.
- Preserve working production business logic and avoid unnecessary rebuilds.
- Govern Raw Data, Demo P, Banner, Care Plan Due, Unlocked Care Plan, Master List, Monthly Change, Disenrolled, Dashboard Quality, templates, timing, and validation workflows.
- Maintain a single-file Apps Script architecture until production stabilization is complete.
- Prioritize template-first formatting, one-pass processing, dashboard configuration caching, and reduced spreadsheet reads/writes.

1.2 Current Production Baseline

Component	Current Role in v1.9	Reference
Framework Specification v1.9	Primary governing authority	Primary governing authority
Production Script v1.4.23	Current executable production baseline	Starting script for future development
v26.9.5 + approved v27 workflows	Historical business logic lineage	Reference only unless needed for regression review
Dashboard Infrastructure v3.2.2	Historical dashboard infrastructure lineage	Reference only unless needed for dashboard regression review
QA Framework v3.4.2	Historical QA lineage	Reference only unless needed for QA regression review

1.3 Primary PMR Row Architecture

The Primary PMR Row is the authoritative participant row. Primary PMR assignment occurs during Raw Data processing and shall not be reassigned during Demo P, Master List, Disenrolled, or Monthly Change processing.

All synchronized participant-level data from Banner, Care Plan Due, Unlocked Care Plan, HHA, O2, PAP, PERS, contact processing, banner summaries, notes processing, and update tracking must be written to the Primary PMR Row.

Master List now contains Primary PMR Rows only. Secondary/source rows are preserved in Raw Data and Demo P where needed for processing and auditability, but they are not written as secondary operational rows on Master List.

1.4 Dashboard Quality Architecture

Dashboard Quality Report is the authoritative QA artifact. Standalone QA report sheets are retired unless explicitly reintroduced by governance approval. Dashboard Quality must use section-only updates, timestamped section headers, and no final full-report rebuild.

Section	Dashboard Quality Content
A	Template Validation
B	Template Header Audit
C	Test 6 Date Formatting
D	Test 7 Validation Failure
E	Test 9 Monthly Change Subheaders
F	Test 10 Dashboard Audit, including Care Plan Sync validation
G	Framework Health Check, including Care Plan Sync validation
H	Signoff
I	Summary
J	Timing Summary

1.5 Protected Production Architecture

Protected Standard	v1.9 Production Meaning
Single File Architecture	Maintain the framework as one Apps Script file until production stabilization is complete.
Dashboard Driven Formatting	Dashboard configuration remains the formatting and template authority.
Template First Formatting	Build templates once; duplicate/copy templates and paste data during normal processing.
Primary PMR Row Architecture	Assign Primary PMR Row in Raw Data only; synchronize to Primary PMR Row only.
One Pass Processing	Read once, process once, write once whenever practical.
Source Data Preservation	Preserve imported source reports and avoid destructive processing unless explicitly approved.
Dashboard Quality Consolidation	Use Dashboard Quality Report sections A-J as the consolidated QA reporting structure.
Template Header Audit	Use one centralized header audit instead of repeated header verification inside individual processes.
Full Replacement Updates	Production releases must replace affected functions completely and remove obsolete logic.

2. Global Standards

Item	Standard
Source of Truth	Framework Specification v1.9 is the governing authority; Production Script v1.4.23 is the executable source of truth.
Historical References	v26.9.5, approved v27 workflows, v3.2.2, and v3.4.2 are architecture lineage references only unless a regression review requires them.
Date Prompt	User enters month only; system uses MM/01/YYYY. Year remains locked February-November and selectable December-January unless changed by approved production rule.
Standard Font	Arial 10pt black, left aligned, vertical middle.
Header Row	Row 4.
Data Start Row	Row 5.
Freeze	Rows 1-4 and Columns A:B.
Date Display Format	mm/dd/yyyy.
Sheet Date Format	mm.yy.
Delete Blank Rows After	After governed template row count or after row 400 when empty for legacy-compatible report cleanup; template row counts control where defined.
Dashboard Quality Report	Authoritative QA report; replaces standalone Test 6, Test 7, Test 9, Test 10, Template Validation, and Framework Health Check report sheets.
Dashboard Quality Section Timestamp	Every Dashboard Quality section header shall include last run timestamp, status, and duration where available.
Template Header Audit	Required centralized QA process validating required template headers for Raw Data, Banner, Care Plan Due, Unlocked Care Plan, Demo P, Master List, Monthly Change, Disenrolled, and Master List Change Log.
Care Plan Sync Validation	Required inside Dashboard Audit and Framework Health Check; not a separate Dashboard Quality section.
Primary PMR Assignment	Occurs only during Raw Data processing.
Master List Row Standard	Master List contains Primary PMR Rows only.
Demo P Tracking Columns	Demo P template must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet.
Row Height Enforcement	Raw Data, Demo P, Master List, and Disenrolled shall enforce data row height 25 at the end of processing to prevent Notes wrapping from expanding rows.

3. Sheet Layout Standards

Item	Standard
Row 1 - Title Row	Height 25, Level 3 fill. A1 = title, Arial 14pt bold, black, overflow. C1:D1 may contain framework/version notes only if it does not interfere with freeze settings.
Row 2 - Date Row	Height 20, Level 3 fill. A2=Date, B2=Start Date, C2=to, D2=End Date when the sheet uses date ranges.
Row 3 - Spacer Row	Height 10, Level 1 fill, no data.
Row 4 - Header Row	Height 40, Level 2 fill, wrap, horizontal left, vertical top.
Rows 5+	Height 25, Arial 10pt, wrap clip, horizontal left, vertical center.
Merge/Frozen Cell Rule	No merged cells may partially cross frozen rows/columns. Break apart merged cells before applying freeze settings when needed.
Dashboard Quality Layout	Dashboard Quality Report uses governed section headers with timestamp/status/duration metadata. Section tables may vary by test but must remain within the consolidated A-J report.
Final Data Row Height Enforcement	Raw Data, Demo P, Master List, and Disenrolled apply standard data row height 25 at the end of their processing functions.

3.1 Row Height Enforcement Sheets

Sheet Type	Required Final Row Height Action
Raw Data	Apply standard data row height 25 after formatting and framework-owned column additions.
Demo P	Apply standard data row height 25 after copy-first/process-once/write-once processing.
Master List	Apply standard data row height 25 after Master List creation and synchronization.
Disenrolled Exclusion	Apply standard data row height 25 after standalone Disenrolled list creation.

4. Color Management

Sheet Type	Base Color	Use
CP Due Date	#65CC99	Report tabs, templates, headers, dashboard references
Unlock CP	#65CCC3	Report tabs, templates, headers, dashboard references
Banners	#65A9CC	Report tabs, templates, headers, dashboard references
Demo P	#657FCC	Report tabs, templates, headers, dashboard references
Master List	#7665CC	Master List tabs, templates, headers, dashboard references
Monthly Change	#A165CC	Monthly Change tabs, templates, headers, dashboard references
Master List Change Log	#CC65CC	Change log/system sheet
Disenrolled Exclusion List	#CC65A1	Disenrollment tracking/system sheet
Index Sheet	#668BCC	Index tab color
Raw Data	Dashboard -defined	Monthly source/import sheet type; color controlled by dashboard configuration
Dashboard Quality Report	Dashboard -defined	Consolidated QA report; color controlled by dashboard configuration

4.1 Shade Levels

Level	Lightness	Usage
Level 1	60%	Row 3, sheet tab accents
Level 2	75%	Header row
Level 3	85%	Title rows, current sheet tabs
Level 4	97%	Alternating colors

5. Naming Standards

Sheet Type	Report Title	Date Format	Example
Raw Data	Raw Data	MM.YY	Raw Data 05.26
Demo P	Demographics - Participants	MM.YY	Demo P 05.26
Banners	Banner Report	MM.YY	Banners 05.26
Unlocked CP	Unlocked Care Plan Report	MM.YY	Unlocked CP 05.26
CP Due	Care Plan Due Date Report	MM.YY	CP Due 05.26
Monthly Change	Monthly Change Report	MM.YY	Monthly Change 05.26
Master List	Master List	MM.YY	Master List 05.26
Disenrolled	Disenrolled Exclusion List	MM.YY from prompt	Disenrolled 05.26
ML Change Log	Master List Change Log	No month or as needed	ML Change Log
Dashboard Quality Report	Dashboard Quality Report	No month	Dashboard Quality Report
Timing Report / Current Timing Report	Timing Report	No month	Timing Report

5.1 Naming Rules

- Monthly output sheets use MM.YY in the sheet name.
- Disenrolled Exclusion List uses the prompted month in the output sheet name.
- Dashboard Quality Report is not month-specific; sections record their own timestamps.
- Timing Report remains a framework timing log and Dashboard Quality Section J provides the timing summary.
- Template sheet names shall remain dashboard-controlled and may be hidden/system sheets.

6. Sheet Organization Standards

Organization Rule	v1.9 Standard
Index Sheet	The index sheet remains first.
Current Month Sheets	Current month operational sheets appear after Index/Raw Data in governed working order.
Visible Working Order	Recommended visible working order: Index, Raw Data, Master List, Demo P, CP Due, Unlocked CP, Banners, Monthly Change,
Framework QA Sheets	Dashboard Quality Report, Timing Summary, Timing Report are framework reporting sheets and should remain accessible for review.
Hidden Templates	Hidden templates and system sheets remain at the end/hidden.
System Sheets	Disenrolled Exclusion List and Master List Change Log may be hidden by default unless actively under review.
Tab Colors	Current sheet tabs use Level 3 color; older sheet tabs use Level 2 color; system sheets may be hidden.

6.1 Create / Refresh Template Order

Template creation and refresh menu order shall follow the current production standard.

Order	Template
1	Banners
2	CP Due Date
3	Unlocked CP
4	Raw Data
5	Demo P
6	Disenrolled Exclusion
7	Master List
8	Monthly Change
9	Master List Change Log

6.2 Dashboard Section B Sheet Definition Order

Dashboard Section B - Sheet Definitions shall use the same order as Create / Refresh Templates. Raw Data is a governed sheet type and must appear in Section B.

- Banners
- CP Due Date
- Unlocked CP
- Raw Data
- Demo P
- Disenrolled Exclusion
- Master List
- Monthly Change
- Master List Change Log

7. Dashboard Configuration Standards

The Format Dashboard remains the configuration authority for formatting, templates, sheet definitions, column definitions, validation, timing, and framework QA. Hardcoded formatting shall be minimized and reserved for protected structural standards or fallback/default handling.

In v1.9 , dashboard governance is expanded to include consolidated Dashboard Quality reporting, Template Header Audit, Care Plan Sync Validation, and section-only QA updates. The dashboard is a configuration source, not a participant-processing source.

7.1 Dashboard Configuration Authority

Configuration Area	v1.9 Standard
Global Settings	Date rules, font defaults, freeze settings, row heights, template row counts, and protected fallback behavior.
Sheet Definitions	Sheet type, title, tab color, date behavior, template behavior, processing behavior, and template order.
Sheet Headers	Required headers and data source mappings for every governed sheet.
Column Definitions	Column width, header font size, data font size, date format, hidden status, horizontal alignment, vertical alignment, and wrap behavior.
Sheet Behaviors	Filters, hidden columns, row/column cleanup behavior, timing, validation, and QA participation.
Template Definitions	Template row counts, template signature/metadata, frozen rows/columns, tab color, filter behavior, and hidden/show column settings.
Dashboard Quality Definitions	Section A-J ownership, section timestamp requirements, section write behavior, and consolidated QA report standards.
Timing Definitions	Current Timing Report logging and Dashboard Quality Section J timing summary behavior.

7.2 Dashboard Quality Report Governance

Dashboard Quality Report is the single consolidated QA report. It replaces standalone QA report sheets for Template Validation, Date Formatting, Validation Failure, Monthly Change Subheader, Dashboard Audit, Framework Health Check, and related QA summaries. Tests shall update only their assigned section. The Dashboard Quality report shall not be deleted, recreated from a hidden template, fully rebuilt, or fully rewritten during normal QA execution.

Rule	Requirement
Section-only updates	Each test writes only its assigned Dashboard Quality section.
Timestamped section headers	Each section header includes Last Run timestamp, status, and duration when available.
No hidden-template creation	Dashboard Quality Report shall not be generated from a hidden template as a normal test step.
No full rebuild	Run All Framework Tests + Dashboard shall not end by rebuilding the full Dashboard Quality report.
No standalone QA report sheets	Standalone Test 6, Test 7, Test 9, Test 10, Template Validation, and Framework Health Check report sheets are retired.
Summary and timing	Section I Summary and Section J Timing Summary are updated after the underlying sections have been written.

7.3 Dashboard Read and Cache Standard

- Dashboard configuration shall be loaded once per process whenever practical.
- Dashboard configuration shall not be repeatedly read inside participant-processing loops.
- Template builders and QA tests may read dashboard configuration, but monthly participant processing should use cached configuration or verified templates.
- Dashboard tables should be treated as configuration tables and not as row-by-row processing sources.

8. Dashboard Configuration Tables

Appendix A remains the complete dashboard column configuration table and must be rebuilt from current production headers during the Appendix phase. Formatter and template builders must use 8.1 Dashboard Control Fields

Control	Required	Description
Column Width	Yes	Pixel width for each header.
Header Font Size	Yes	Font size for row 4 header display.
Data Font Size	Yes	Font size for rows 5+.
Date Format	Yes for dates	Applies mm/dd/yyyy display to configured date columns.
Hidden Column	Yes	Whether columns should be hidden after formatting.
Wrap Mode	Yes	Row 4 wrap; data rows clip unless overridden.
Horizontal Alignment	Yes	Default left.
Vertical Alignment	Yes	Headers top, data middle.
Row Height	Yes	Rows 1-4 and data rows.
Freeze Settings	Yes	Rows 1-4 and Columns A:B.
Template Row Count	Yes for templates	Defines the governed template row capacity.
Template Header Audit	Yes	Identifies whether the sheet participates in centralized template header audit.
Dashboard Quality Section	Yes for QA tests	Defines section ownership for consolidated Dashboard Quality Report.
Timing Participation	Yes for timed workflows	Defines whether a process logs to Current Timing Report and Dashboard Quality Section J.

8.2 Dashboard Quality Section Ownership Table

Section	Owner / Test	Purpose	Write Rule
A	Template Validation	Validate template presence and template-level configuration.	Section A only.
B	Template Header Audit	Validate required headers across governed templates.	Section B only.
C	Test 6 Date Formatting	Validate date columns and mm/dd/yyyy display formatting.	Section C only.
D	Test 7 Validation Failure	Report validation failures and issue details.	Section D only.
E	Test 9 Monthly Change Subheaders	Validate Monthly Change subheaders and section structure.	Section E only.
F	Test 10 Dashboard Audit	Validate dashboard integrity and include Care Plan Sync audit results.	Section F only.
G	Framework Health Check	Validate framework readiness and include Care Plan Sync health result.	Section G only.
H	Signoff	Provide release signoff / readiness status.	Section H only.
I	Summary	Summarize consolidated QA results.	Section I only.
J	Timing Summary	Summarize timing log and recent bottlenecks.	Section J only.

8.3 Governed Template / Sheet Definition Order

The dashboard Sheet Definitions order and Create / Refresh Templates menu order must match.

Order	Sheet / Template Definition	Header Audit Required
1	Raw Data	Yes
2	Banners	Yes
3	CP Due Date	Yes
4	Unlock CP	Yes
5	Demo P	Yes
6	Master List	Yes
7	Monthly Change	Yes
8	Disenrolled Exclusion List	Yes
9	Master List Change Log	Yes

8.4 Template Row Count Standards

Template	Approved Row Count
Raw Data	6500
Banners	400
CP Due Date	400
Unlock CP	400
Demo P	2500
Master List	400
Monthly Change	1000
Disenrolled Exclusion List	800
Master List Change Log	1000

8.5 Header Validation Standard

Template Header Audit is the single authoritative header validation process. Individual formatter, synchronization, and processing functions shall not duplicate full header verification logic except for minimal defensive checks required to prevent destructive writes or runtime errors.

9. Data Source Mapping Standards

Every governed sheet must have a formal header-to-source mapping. Appendix C contains the authoritative mapping tables and must be rebuilt from current production headers. This section defines the governing mapping terminology and required synchronization standards.

Mapping Term	Definition
Raw Data	Pulled directly from the monthly report import. Raw Data is the source of Primary PMR Row assignment.
Demo P	Copied or derived from formatted active Raw Data rows. Demo P uses copy-first/process-once/write-once architecture.
Sync from Banners	Updated from the Banners after Banner processing.
Sync Unlock CP	Updated from the Unlock CP using PMR-based matching.
Sync Care Plan Due	Updated from the CP Due Date using Participant Name + Enrollment Date matched to Participant Name + Capitation Date.
Process	Generated by script logic such as address combining, notes, contact summaries, Banner Summary, phone labeling, Primary PMR Row designation, or update tracking.
<blank>	Intentionally present but not populated by current workflow.
Dashboard Quality	Generated by QA tests and framework health checks into the consolidated Dashboard Quality Report.
Timing	Generated by timing logger into Current Timing Report and summarized in Dashboard Quality Section J.

9.1 Required Source Mapping Governance

- Raw Data must preserve source columns and add only approved framework-owned columns.
- Primary PMR Row must be assigned in Raw Data and copied downstream.
- Demo P must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet.
- Master List must include Master List Update Status, Master List Update Month, and Master List Source Sheet.
- Care Plan fields synchronize to Master List Primary PMR Rows only.
- Banner fields synchronize to Master List Primary PMR Rows only.
- Disenrolled output is built through the standalone Create Disenrolled List workflow using the prompted month and current approved column set.

9.2 Care Plan Synchronization Mapping Standard

Sync	Match Rule	Fields Synchronized	Target
Unlocked CP Sync	Unlocked CP PMR # matches Master List Participant PMR#.	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date.	Master List Primary PMR Row only.
Care Plan Due Sync	Care Plan Due Participant Name + Enrollment Date matches Master List Participant Name + Capitation Date.	Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type.	Master List Primary PMR Row only.

Care Plan Sync validation belongs in Dashboard Quality Section F - Dashboard Audit and Section G - Framework Health Check. It shall not be implemented as a separate Dashboard Quality section.

9.3 Demo P Update Tracking Mapping Standard

Header	Source	Required Value Standard
--------	--------	-------------------------

Demo P Update Status	Process	Created / Updated / Processed status as produced by Demo P processing.
Demo P Update Month	Process	Current processing month in mm.yy format.
Demo P Source Sheet	Process	Raw Data mm.yy source sheet name.

9.4 Master List Update Tracking Mapping Standard

Header	Source	Required Value Standard
Master List Update Status	Process	Created / Updated / Unchanged / Synced status as produced by Master List processing.
Master List Update Month	Process	Current processing month in mm.yy format.
Master List Source Sheet	Process	Demo P mm.yy source sheet name or approved source sheet reference.

10. Monthly Change Report Rules

Rule Area	v1.9 Rule
Required Sections	Enrollments, Disenrollments, Demographic Changes, Caseload Changes, Contact Changes, Banner Changes, Care Plan Changes.
Duplicates	No duplicates are allowed except approved Contact Changes logic.
Enrollments	Included when Capitation Date is the current report month.
Disenrollments	Included when Disenrollment Date, Disenrollment Effective Date, or Date of Death meets the previous-month/current workflow rule.
Contact Fields	Route to Contact Changes according to approved current production logic.
Banner Fields	Route to Banner Changes.
Caseload Fields	Route to Caseload Changes.
Oxygen	Routes to Service Changes unless superseded by final business rule.
Primary PMR Row-only Changes	Handled as Primary Row Update without replacing all participant source/detail rows.
Raw Data/Demo P Primary Rows Only	Monthly Change processing compares against the current Raw Data/Demo P Primary PMR row architecture and shall not recreate secondary Master List rows.
Standalone Disenrolled	Disenrolled Exclusion List is created through its standalone workflow and may be used to exclude disenrolled participants from inappropriate non-disenrollment change reporting.

10.1 Monthly Change Preservation Rule

Monthly Change logic shall not be rebuilt from scratch. Working v26.9.5 + approved v27 business logic is preserved unless the current v1.4.23 production script supersedes it. Updates should target performance bottlenecks, template architecture, Dashboard Quality consolidation, and Primary PMR ownership rules.

11. Master List Processing Rules

Master List is the primary operational participant repository. In v1.9 , Master List contains Primary PMR Rows only. This replaces prior language that retained secondary rows on Master List as operational source/detail rows. Source/detail rows remain available in Raw Data and Demo P where needed for processing, but Master List is now the consolidated Primary PMR operational view.

Processing Rule	v1.9 Standard
Primary Operational Repository	Master List is the primary operational participant repository.
Row Architecture	Master List contains Primary PMR Rows only.
Synchronization Target	Only the Primary PMR Row is the downstream synchronization target.
Sync-Derived Values	All sync-derived values must be consolidated onto the Primary PMR Row.
Source/Detail Rows	Source/detail rows are retained in Raw Data and Demo P where needed for processing and auditability, but shall not be written as secondary operational Master List rows.
Processing Includes	Banner Summary, address processing, language processing, split and label phones, contact summary, notes combination, update tracking, synchronization, sorting if retained by production script, and validation.
One Pass Update Architecture	Compare current Demo P to prior Master List, identify changed participants/Primary PMR rows, and update only necessary rows.
Primary PMR-Only Changes	If changes are limited to Primary PMR Row fields, replace/update only the Primary PMR Row.
Care Plan Sync	Unlocked CP sync and Care Plan Due sync must populate Master List Primary PMR Rows only.
Update Tracking	Master List Update Status, Master List Update Month, and Master List Source Sheet are governed process fields.

11.1 PRIMARY PMR OWNERSHIP STANDARD

Purpose

The Primary PMR Row is the authoritative participant record within the Master List Framework. It serves as the official synchronization target for participant-level information and controls participant-level reporting, processing, update tracking, and downstream reporting.

Primary PMR Row Definition

- Every participant shall have exactly one Primary PMR Row.
- The Primary PMR Row shall be identified using the Primary PMR Row field.
- Primary PMR Row assignment occurs during Raw Data processing only.
- The Primary PMR Row field shall be copied to Demo P and used downstream, but not reassigned downstream.
- Demo P, Master List, Monthly Change, and Disenrolled shall not perform a sequential block scan to reassign Primary PMR ownership.

Ownership Rules

All participant-level synchronized data shall be written only to the Primary PMR Row.

Data Category	Ownership Target
Banner fields	Primary PMR Row
Care Plan fields	Primary PMR Row
Unlocked CP fields	Primary PMR Row
HHA fields	Primary PMR Row
O2 fields	Primary PMR Row
PAP fields	Primary PMR Row
PERS fields	Primary PMR Row
Processing summaries	Primary PMR Row
Contact summaries	Primary PMR Row
Notes summaries	Primary PMR Row
Banner Summary	Primary PMR Row
Contact Summary	Primary PMR Row
Participant Summary fields	Primary PMR Row
Update tracking fields	Primary PMR Row

Source / Detail Row Rules

- Raw Data may contain source rows and supporting detail rows.
- Demo P may preserve copied active rows required for processing and auditability.
- Source/detail rows may contain contact records, phone records, service records, or supporting participant data.
- Source/detail rows shall not be used as downstream synchronization targets.
- Master List shall contain Primary PMR Rows only.

Monthly Update Rules

- If monthly changes affect only Primary PMR Row fields, replace/update the Primary PMR Row only.
- If source/detail fields change, process those changes through Raw Data/Demo P logic and update only the affected Primary PMR output row or related report output.
- Do not replace all participant rows when only Primary PMR fields change.

Synchronization Rules

- All external synchronization processes shall target the Primary PMR Row.
- Banner synchronization shall target the Primary PMR Row.
- Care Plan Due synchronization shall target the Primary PMR Row.
- Unlocked CP synchronization shall target the Primary PMR Row.
- HHA, O2, PAP, and PERS synchronization shall target the Primary PMR Row.

Protected Standard

Primary PMR Ownership is a protected framework standard. It may not be removed, bypassed, or modified without explicit approval.

11.2 One Pass Processing Standard

Purpose

The One Pass Processing Standard minimizes spreadsheet interaction overhead by optimizing read and write operations. It applies to Master List processing and, where practical, to Raw Data, Demo P, Banner, Care Plan, Monthly Change, and Disenrolled workflows.

Processing Rule

Framework execution logic shall perform consolidated reads, in-memory processing, and consolidated writes whenever practical.

Processing Step	v1.9 Standard
Read	Read required sheet values once or in the fewest practical bulk reads.
Process	Construct Banner Summary flags, execute address processing, generate contact summaries, aggregate notes, apply phone labels, apply update tracking, and use existing Primary PMR Row ownership.
Write	Commit processed values to the sheet in a final consolidated write stage whenever practical.

Specific Demo P Correction

- Demo P shall copy active Raw Data rows first, then process once, then write once.
- Demo P shall not verify or reassign Primary PMR Row because Primary PMR ownership is assigned in Raw Data and copied to Demo P.
- Demo P shall not perform Banner source memory synchronization as a separate processing pass.

Performance Goal

Eliminate redundant sheet-wide I/O cycles for identical data objects to ensure framework scalability. Avoid repeated `getValues()`, `setValues()`, dashboard reads, formatting passes, and participant reprocessing loops.

11.3 Synchronization Ownership Matrix

Source	Match Rule	Target	Notes
Banner	Participant PMR# / approved Banner matching logic	Primary PMR Row	Banner flags and Banner Summary synchronize to Primary PMR Row.
Care Plan Due	Participant Name + Enrollment Date to Participant Name + Capitation Date	Primary PMR Row	Sync Enrollment Date, Last Care Plan, Next Care Plan Due, CP Type.
Unlocked Care Plan	PMR # to Participant PMR#	Primary PMR Row	Sync Participant Name, PMR #, IDT Meeting Date, Care Plan Start Date.
HHA CP	Approved HHA CP matching logic	Primary PMR Row	Target remains Primary PMR Row.
HHA ISR	Approved HHA ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
O2 ISR	Approved O2 ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
PAP ISR	Approved PAP ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
PERS ISR	Approved PERS ISR matching logic	Primary PMR Row	Target remains Primary PMR Row.
Secondary Contact Rows	Not a synchronization target	Contact Processing Only	Contact/source rows are used for processing, not sync target output.
Demo P Update Tracking	Process generated	Primary PMR Row	Demo P Update Status, Month, Source Sheet.
Master List Update Tracking	Process generated	Primary PMR Row	Master List Update Status, Month, Source Sheet.

11.3.1 Care Plan Sync Validation Ownership

Validation	Dashboard Quality Location	Purpose
Unlocked CP Sync Validation	Section F Dashboard Audit and Section G Framework Health Check	Verify PMR-based sync and missing/unmatched CP fields.
Care Plan Due Sync Validation	Section F Dashboard Audit and Section G Framework Health Check	Verify Participant Name + Enrollment Date to Participant Name + Capitation Date sync.

Care Plan Sync validation shall not be assigned a new standalone Dashboard Quality section. It belongs inside Dashboard Audit and Framework Health Check.

12. Banner Processing Rules

The v1.9 correction is that monthly Banner formatting shall use the faster v1.4.21-compatible production formatting process where approved, rather than the slower Banner-pattern conversion that was tested during stabilization. Template creation remains governed by Template First Formatting, but monthly Banner processing must prioritize data movement over repeated formatting.

12.1 Banner Source Fields

Source FieldSource Field	SourceSource	Processing RuleProcessing Rule
Last Name	Banners / Raw Data	Used for identity support and report context.
First Name	Banners / Raw Data	Used for identity support and report context.
Participant PMR#	Banners / Raw Data	Primary participant match key for Banner synchronization.
Safety - 2 Person	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Wanderer	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Interpreter Needed	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Fall Risk	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
DPOA or Guardian Active	Banners	Banner flag synchronized to Raw Data Primary PMR Row.
Palliative Care	Banners	Banner flag synchronized to Raw Data Primary PMR Row.

12.2 Banner Synchronization Rules

RuleRule	v1.9 Standard
Raw Data Banner Fields	Raw Data receives Banner values by Sync from Banners after Banner processing.
Master List Banner Fields	Copies from Demo P
Banner Summary	Banner Summary is script-built in Demo P Process and must summarize relevant Banner flags on the Primary PMR Row.
Primary PMR Target	No Banner value shall be written to a non-primary Master List row.
Header Dependency	Banner synchronization depends on governed headers and is validated by Template Header Audit rather than repeated full header verification inside Banner processing.
Monthly Formatting	Monthly Banner processing shall use the faster v1.4.21-compatible formatting logic where approved.

12.3 Banner Processing Performance Standard

- Do not rebuild Banner formatting during normal monthly processing unless explicitly requested.
- Use verified templates for formatting authority.
- Avoid repeated setColumnWidths(), setBackgrounds(), setFontSizes(), and full-format verification passes.
- Retain Banner business logic and replace only performance bottlenecks or obsolete formatting paths.

13. Care Plan Processing Rules

Care Plan fields must be written to the Master List Primary PMR Row only. Care Plan synchronization must be validated inside Dashboard Quality Section F - Dashboard Audit and Section G - Framework Health Check.

13.1 Care Plan Source Fields

Report	Source Fields	Purpose
CP Due Date	Participant Name; Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type	Provides Care Plan Due synchronization fields.
Unlock CP	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date	Provides Unlocked CP synchronization fields.

13.2 Required Care Plan Synchronization Order

StepStep	SynchronizationSynchroniza	Match RuleMatch Rule	Fields SyncedFields Synced	TargetTarget
1	Unlocked CP Sync	Unlocked CP PMR # matches Master List Participant PMR#.	Participant Name; PMR #; IDT Meeting Date; Care Plan Start Date.	Master List Primary PMR Row only.
2	Care Plan Due Sync	Care Plan Due Participant Name + Enrollment Date matches Master List Participant Name + Capitation Date.	Enrollment Date; Last Care Plan; Next Care Plan Due; CP Type.	Master List Primary PMR Row only.

13.3 Care Plan Source Fields

Source FieldSource Field	SourceSource	Processing RuleProcessing Rule
PMR # / Participant PMR#.	Unlocked CP / Master List	Used for identity support and report context.
Participant Name	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
IDT Meeting Date	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
Care Plan Start Date	Unlocked CP	Unlock CP synchronized to Master List Primary PMR Row.
Participant Name	CP Due Date / Master List	Used for identity support and report context.
Enrollment Date / Capitation Date.	CP Due Date / Master List	Used for identity support and report context.
Last Care Plan	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.
Next Care Plan Due	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.
CP Type	CP Due Date	CP Due Date synchronized to Master List Primary PMR Row.

13.3 Care Plan Sync Validation

Validation AreaValidation Area	Dashboard Quality LocationDashboard Quality Location	Required ResultRequired Result
Unlocked CP Matches	Section F - Test 10 Dashboard Audit	Report matched, unmatched, and missing key counts.
Care Plan Due Matches	Section F - Test 10 Dashboard Audit	Report matched, unmatched, and missing key counts.
Unlocked CP Health	Section G - Framework Health Check	Pass/fail summary for Unlocked CP synchronization readiness.
Care Plan Due Health	Section G - Framework Health Check	Pass/fail summary for Care Plan Due synchronization readiness.
Rows Missing CP Data	Sections F and G	Identify rows missing IDT Meeting Date, Care Plan Start Date, Next Care Plan Due, or CP Type where applicable.

Care Plan Sync validation shall not be created as a separate Dashboard Quality section. It is an audit/health result inside existing Sections F and G.

13.4 Care Plan Formatting and Template Rules

SheetSheet	Template / Formatting StandardTemplate / Formatting Standard
CP Due Date	Monthly formatting uses the faster v1.4.21-compatible production process where approved. Template creation uses corrected template steps.
Unlock CP	Monthly formatting uses the faster v1.4.21-compatible production process where approved. Apply Full Template Formatting remains allowed for the Unlocked Care Plan template path.

- Care Plan Due and Unlocked CP sheets use the standard title/header/data layout.
- Formatting verification shall not run during normal monthly processing.
- Template Header Audit validates required Care Plan headers centrally.
- Care Plan source sheets must not be destructively altered except by approved formatting workflow.

14. Demo P Processing Rules

Demo P remains the primary monthly participant processing sheet. In v1.9 , Demo P processing is corrected to copy active Raw Data rows first, process once, and write once. Primary PMR ownership is not assigned or verified in Demo P because it is assigned in Raw Data and copied to Demo P.

Demo P must preserve required source information for processing and auditability while generating the governed Demo P update tracking columns.

14.1 Demo P Required Architecture

Rule	v1.9 Standard
Primary Source	Raw Data is the authoritative monthly import source.
Copy First	Demo P must copy active Raw Data rows before performing Demo P processing.
Process Once	Demo P applies required process fields in a single consolidated pass whenever practical.
Write Once	Demo P should use consolidated writes instead of repeated row-by-row writes.
Primary PMR Ownership	Demo P shall not assign, verify, or rescan Primary PMR Row ownership.
Banner Memory Sync	Not apart of Demo P processing
Disenrolled PMR Exclusion Set	Demo P may use the Disenrolled PMR set to exclude disenrolled PMRs from active Demo P output where approved by workflow.
Final Row Height	Demo P shall enforce row height 25 after processing.

14.2 Demo P Required Columns

Required Column	Source	Rule
Primary PMR Row	Copied from Raw Data	Authoritative ownership marker. Not reassigned in Demo P.
Demo P Update Status	Process	Required template/header column populated by Demo P processing.
Demo P Update Month	Process	Required template/header column populated with current processing month.
Demo P Source Sheet	Process	Required template/header column populated with Raw Data source sheet name.

The Demo P template must include Demo P Update Status, Demo P Update Month, and Demo P Source Sheet. These columns are governed by the Template Header Audit.

14.3 Demo P Banner Relationship

Area	v1.9 Standard
Banner Fields	Not a part of Demo P processing - copies from Raw Data
Banner Memory Sync Removal	Not a part of Demo P processing - copies from Raw Data
Banner Summary	Banner Summary is generated by script logic and belongs on the Primary PMR Row downstream.

14.4 Demo P Processing Removals

Removed / Prohibited Step	Replacement Standard
Demo P Working Source - assign Primary PMR Row by sequential block scan	Primary PMR Row is assigned in Raw Data and copied to Demo P.
Demo P Working Source - verify Primary PMR Row from Raw Data	No verification step required in Demo P; Template Header Audit validates the column exists.
Demo P Working Source - sync newest Banners mm.yy source into memory	Not a part of Demo P processing - copies from Raw Data
Repeated Demo P participant scans	Use copy-first/process-once/write-once architecture.

14.5 Demo P Update Tracking Standard

Header	Required Meaning	Validation
Demo P Update Status	Indicates processing/update status for the Demo P row.	Template Header Audit; optional Dashboard Audit summary.
Demo P Update Month	Stores current report month in mm.yy format.	Template Header Audit; optional Dashboard Audit summary.
Demo P Source Sheet	Stores the Raw Data source sheet name.	Template Header Audit; optional Dashboard Audit summary.

15. Disenrollment Processing Rules

Disenrollment processing is now a standalone governed workflow. The framework shall maintain a Disenrolled Exclusion List, but the Repair Disenrolled List workflow and menu item are retired.

Disenrolled participants may remain in RTZ/Demo P source data but should be excluded from inappropriate non-disenrollment monthly changes where approved by workflow. The Disenrolled Exclusion List and Master List Change Log remain system sheets and may be hidden by default.

15.1 Standalone Disenrolled Workflow

Rule	v1.9 Standard
Workflow Name	Create Disenrolled List.
Prompt	Create Disenrolled List prompts for the reporting month/date and uses that prompted value for the output sheet name.
Output Naming	Disenrolled MM.YY.
Source	Raw Data for the prompted month unless otherwise approved by production workflow.
PMR Use	Disenrolled PMR sets may be used by Demo P processing to exclude disenrolled PMRs from active output where approved.
Template	Disenrolled Exclusion List uses its governed template and approved reduced column set.
Final Row Count	Disenrolled template row count standard is 800.
Final Row Height	Disenrolled output enforces row height 25 after processing.

15.2 Disenrolled Validation Standard

Validation	Required Behavior
Template Header Audit	Validates only the approved Disenrolled column set, not removed columns.
Dashboard Count	Disenrolled output row count must align with dashboard template row count standard unless source data requires fewer used rows.
Date Prompt Naming	Output sheet name must use the month/date from the prompt.
No Repair Menu	Repair Disenrolled List shall not appear in menus or framework dispatchers.

16. Framework Development Standards

The Framework Development Standards remain protected. The framework shall be evolved from the current production script and shall not be rebuilt from memory. v1.4.23 is the current production baseline for future framework development.

Development Rule	v1.9 Standard
Production source	Use Production Script v1.4.23 as the current executable baseline.
Governing specification	Use Framework Specification v1.9 as the governing authority after final assembly.
Historical references	Use v26.9.5, approved v27 workflows, v3.2.2, and v3.4.2 as lineage/reference only unless regression review requires them.
Review requirement	Always inspect the full script before modifying.
Full replacement requirement	Full replacement scripts only unless explicitly requested.
Patch prohibition	No patch snippets for production releases.
Code cleanup	Remove obsolete, deprecated, duplicate, orphaned, unused, and dead code.
Working logic preservation	Keep working business logic unchanged unless specifically requested or required by approved architecture.
Single-file architecture	Maintain clean single-file section architecture until production stabilization is complete.
Menu cleanup	Remove retired menu items such as Repair Disenrolled List when retired by specification.
Dashboard Quality	Use consolidated Dashboard Quality sections A-J rather than standalone QA report sheets.

16.1 Architecture Rules

Rule	Requirement
Review full script before changes	Required before every production script update.
No patch updates	Production releases must be full replacement versions.
Full replacement updates	Replace affected functions completely.
Remove obsolete logic	Required during every production release.
Remove duplicate logic	Required during every production release.
Remove orphan code	Required during every production release.
Remove dead code	Required during every production release.
Remove deprecated helpers	Required during every production release.
Build for long-term maintenance	No layered temporary fixes or hidden legacy logic.
Preserve approved business logic	Do not rebuild Monthly Change, Master List, Contact, Banner, Care Plan, or Demo P logic unless correcting approved bottlenecks or architecture defects.

16.2 Code Cleanup Requirements

Review Area	Required Action
Duplicate function review	Identify and remove duplicate implementations.
Duplicate constant review	Remove duplicate or obsolete global constants.
Duplicate menu review	Remove duplicate and retired menu items.
Unused helper review	Remove helpers that are not referenced by active workflow, audit, QA, menu, or framework functions.
Orphan function review	Remove functions not called by menu, workflow, validation, QA test, framework dashboard, or active helper chain.
Dead code review	Remove unreachable code paths.
Legacy code review	Remove legacy commented-out code and backup functions.

16.3 Update Rules

Update Step	Requirement
Review entire script	Required before change.
Determine impacted functions	Identify all upstream/downstream dependencies.
Replace affected functions completely	Do not layer patches.
Verify references	Verify helper, menu, trigger, dashboard, validation, QA, and timing references.
Verify menus	Confirm no retired menu item remains.
Verify triggers	Confirm no broken trigger references.
Verify helpers	Confirm helpers exist exactly once.
Update version	Increment version, release notes, and change log.

16.D Single File Architecture Standard

Purpose

The Master List Framework shall use a single production script during active development. This architecture minimizes version-control issues, simplifies deployment, reduces upload complexity, and ensures all framework components remain synchronized during rapid development.

Development Standard

- Do not split the framework into multiple Google Apps Script (.gs) files during active development.
- Do not recommend modular architecture during production stabilization.
- All framework components shall remain within a single production script until Dashboard, template, Primary PMR, Monthly Change, validation, Dashboard Quality, timing, and QA architecture are finalized.
- After a stable production release, modularization may be reviewed, but it is not the current approved architecture.

Required Script Sections

Script Section	Required
CONFIGURATION	Yes
MENU FUNCTIONS	Yes
DASHBOARD FUNCTIONS	Yes
TEMPLATE FUNCTIONS	Yes
FORMATTERS	Yes
SYNC FUNCTIONS	Yes
MONTHLY CHANGE FUNCTIONS	Yes
MASTER LIST FUNCTIONS	Yes
DISENROLLMENT FUNCTIONS	Yes
VALIDATION FUNCTIONS	Yes
FRAMEWORK TEST FUNCTIONS	Yes
DASHBOARD QUALITY FUNCTIONS	Yes
FRAMEWORK DASHBOARD FUNCTIONS	Yes where retained by production script
TIMING FUNCTIONS	Yes
HELPER FUNCTIONS	Yes

Section Header Standard

Each major section shall use standardized section headers. Example:

```
// =====  
// CONFIGURATION  
// =====
```

Deployment Standard

Release Package Item	Required
Version Number	Yes
Change Summary	Yes
Removed Code Summary	Yes
Helper Audit Summary	Yes
Framework Health Check Summary	Yes
Testing Checklist	Yes
Performance Impact Review	Yes
Full Replacement Script	Yes

Future Migration Standard

When the framework reaches a stable production state, logical sections may be migrated into separate files only after governance approval. Any future modular architecture must preserve Framework Dashboard/Dashboard Quality, Framework Tests, Validation Framework, Timing Framework, Primary PMR Row Architecture, One Pass Processing Architecture, and Dashboard Configuration Standards.

Protected Standard

The Single File Architecture is a protected framework standard and shall not be modified without explicit approval.

16.E Script Rebuild Standard

Purpose

The Master List Framework shall use complete replacement updates during development and production releases.

Rebuild Rules

Rule	Requirement
Patch-style fixes	Not permitted for production releases.
Partial production replacements	Not permitted unless explicitly requested.
Obsolete logic	Remove.
Duplicate logic	Remove.
Deprecated logic	Remove.
Unused helpers	Remove.
Dead code	Remove.
Orphan functions	Remove.
Commented-out legacy code	Remove.
Backup functions	Remove.
Unused variables/constants	Remove.

Update Rules

Verification Area	Required
Entire script reviewed	Yes
Impacted functions identified	Yes
Affected functions completely replaced	Yes
Helper references verified	Yes
Menu references verified	Yes
Trigger references verified	Yes
Dashboard references verified	Yes
Validation references verified	Yes
Dashboard Quality references verified	Yes
Timing references verified	Yes

Maintenance Standard

- Build for long-term maintainability.
- Avoid technical debt.
- Avoid temporary workarounds.
- Keep working sections unchanged unless specifically requested.
- All production releases shall be delivered as full replacement versions.

16.F Production Update Standard

Purpose

The Production Update Standard mandates rigorous end-to-end review for all future enhancements. Isolated patches and fragmented modifications are prohibited in favor of complete affected-function replacement and comprehensive audit.

Production Update Requirements

Audit / Review	Required
Full production script inspection	Yes
Validation against Framework Specification v1.9	Yes
Operational workflow assessment	Yes
Shared helper dependency verification	Yes
Custom menu integration verification	Yes
Dashboard configuration/reference evaluation	Yes
Dashboard Quality section/reference evaluation	Yes
Performance timing and execution dependency review	Yes
Internal validation rules and logic tree audit	Yes
Framework testing regression analysis	Yes

Required Release Deliverables

Deliverable	Required
Architecture Audit	Yes
Helper Audit	Yes
Dependency Audit	Yes
Performance Audit	Yes
Removed Code Summary	Yes
Change Summary	Yes
Testing Recommendations	Yes
Framework Health Check Summary	Yes
Recommended Next Version	Yes
Full Replacement Script	Yes

Framework Integrity Standard

Architecture Standard	Must Preserve
Single File Code Architecture	Yes
Primary PMR Row Data Architecture	Yes
One Pass Processing Methodology	Yes
Dashboard-Driven Formatting Logic	Yes
Standardized Template Architecture	Yes
Dashboard Quality Consolidated Reporting	Yes
Centralized Validation Framework	Yes
Template Header Audit	Yes
Standardized QA Testing Architecture	Yes
Timing Framework	Yes

The Production Update Standard is a protected framework protocol. Modifications, bypasses, or deletions of these requirements are prohibited without explicit governance approval.

17. Helper Audit Standards

Purpose

The Helper Audit ensures that all shared helper functions required by the Master List Framework exist, are referenced correctly, and are maintained in a clean, dependency-safe state.

Helper Audit Requirement

Audit Item	Pass Requirement
All referenced helper functions exist	Pass required
No duplicate helper functions exist	Pass required
No orphan helper functions exist	Pass required
No unused helper functions exist	Pass required
No deprecated helper functions remain	Pass required
No helper references are broken	Pass required

Helper Management Rules

- All shared helper functions shall exist exactly once within the production script.
- Helper functions shall be maintained in the HELPER FUNCTIONS section of the framework.
- If a helper function is redesigned, the previous implementation shall be removed.
- Only one active implementation of a helper function may exist within the framework.

Approved Helper Reference Areas

Reference Area	May Reference Helpers
Menu Functions	Yes
Dashboard Functions	Yes
Template Functions	Yes
Formatters	Yes
Sync Functions	Yes
Monthly Change Functions	Yes
Master List Functions	Yes
Disenrollment Functions	Yes
Validation Functions	Yes
Framework Test Functions	Yes
Dashboard Quality Functions	Yes
Timing Functions	Yes
Other approved helper functions	Yes

Common Framework Helpers

Helper	Purpose / Standard
toBool_	Boolean normalization.
truthy_	Truthy value normalization.
toNumber_	Numeric normalization.
normalizeHeader_	Header normalization.
normalizeAlignment_	Alignment normalization.
normalizeText_	Text normalization.
normalizeKey_	Key normalization.
compareValues_	Value comparison.
getWrapStrategy_	Wrap strategy normalization.
safeColor_	Color fallback/validation.
safeSheetName_	Safe sheet name generation.

Additional helpers may be added as the framework evolves, but duplicate helper implementations are not allowed.

18. Framework Health Check Standards

Purpose

The Framework Health Check verifies that all critical framework components exist, are functioning correctly, and are ready for production use. It serves as the final framework readiness review prior to release.

Framework Health Check Requirement

- A Framework Health Check shall be completed before every production release.
- A release shall not be considered production-ready until all Framework Health Check items pass.
- Framework Health Check output belongs in Dashboard Quality Section G.
- Framework Health Check shall update Section G only and shall not erase or rebuild the full Dashboard Quality Report.

Framework Component Verification

Component Category	Required Verification
MENU FUNCTIONS	Exist and referenced correctly.
DASHBOARD FUNCTIONS	Exist and referenced correctly.
TEMPLATE FUNCTIONS	Exist and referenced correctly.
FORMATTER FUNCTIONS	Exist and referenced correctly.
SYNC FUNCTIONS	Exist and referenced correctly.
MONTHLY CHANGE FUNCTIONS	Exist and referenced correctly.
MASTER LIST FUNCTIONS	Exist and referenced correctly.
DISENROLLMENT FUNCTIONS	Create Disenrolled exists; Repair Disenrolled retired/absent.
VALIDATION FUNCTIONS	Exist and referenced correctly.
FRAMEWORK TEST FUNCTIONS	Exist and referenced correctly.
DASHBOARD QUALITY FUNCTIONS	Exist and section assignments A-J are valid.
TIMING FUNCTIONS	Exist and write to the current timing log.
HELPER FUNCTIONS	Exist and no broken references.

Reference Verification

Reference Type	Requirement
Menu references	All menu references exist; retired triggers removed.
Helper references	All helper references exist.
Dashboard references	All dashboard references exist.
Dashboard Quality references	All section references exist and map to A-J.
Validation references	All validation references exist.
Framework references	All framework references exist.
Timing references	All timing references exist.
Trigger references	All trigger references exist or retired triggers are removed.

ReferenceError Standard

No ReferenceErrors are permitted in production releases. Missing helpers, validation functions, framework functions, dashboard functions, timing functions, menu functions, or Dashboard Quality functions block release.

Protected Framework Components

Protected Component	Required
Framework Dashboard / Dashboard Quality	Yes
Dashboard Validation	Yes
Template Validation	Yes
Template Header Audit	Yes
Helper Audit	Yes
Dependency Audit	Yes
Orphan Function Audit	Yes
Duplicate Function Audit	Yes
Framework Health Check	Yes
Timing Logs	Yes
Care Plan Sync Validation	Yes, inside Dashboard Audit and Framework Health Check.

Pass Criteria

Criterion	Pass Requirement
No missing functions	Pass required
No missing helpers	Pass required
No missing references	Pass required
No ReferenceErrors	Pass required
No missing framework components	Pass required
No missing validation components	Pass required
No missing dashboard components	Pass required
No missing Dashboard Quality components	Pass required
No missing timing components	Pass required
Care Plan Sync validation result	Must be present in Sections F and G.

Framework Health Check is a mandatory release gate. Production releases shall not be issued until all Framework Health Check items pass successfully.

19. Testing Workflow Standards

Purpose

The Testing Workflow ensures that all framework components operate correctly before release and that production updates do not introduce regressions, missing dependencies, missing Dashboard Quality sections, or ReferenceErrors.

Testing Requirement

- Testing shall be performed before every production release.
- Testing shall be recommended after every framework update.
- All production releases shall complete the required testing workflow.
- Dashboard Quality Report is the consolidated testing output.

Dashboard Quality Section Test Matrix

Section	Test / Output	Purpose	Standalone Report Sheet
A	Template Validation	Validate templates and template configuration.	Retired; writes to Section A.
B	Template Header Audit	Validate governed headers across templates.	New consolidated section.
C	Test 6 Date Formatting	Validate date formatting.	Retired; writes to Section C.
D	Test 7 Validation Failure	Validate/report framework validation failures.	Retired; writes to Section D.
E	Test 9 Monthly Change Subheaders	Validate Monthly Change sections/subheaders.	Retired; writes to Section E.
F	Test 10 Dashboard Audit	Validate dashboard and include CP Sync audit.	Retired; writes to Section F.
G	Framework Health Check	Validate release readiness and include CP Sync health.	Retired as standalone report; writes to Section G.
H	Signoff	Release readiness/signoff output.	Consolidated.
I	Summary	Consolidated QA summary.	Consolidated.
J	Timing Summary	Timing summary from current timing log.	Consolidated.

Testing Categories

Category	Required in v1.9
Dashboard Integrity Test	Yes; output in Dashboard Audit section.
Template Validation	Yes; output in Section A.
Template Header Audit	Yes; output in Section B.
Fast Structure Validation	Yes where retained; may be included in Template Validation or Dashboard Audit.
Format Preview	Optional/QA as needed; not part of monthly processing.
Framework Dashboard / Dashboard Quality	Yes; consolidated output required.
Helper Audit	Yes.
Dependency Audit	Yes.
Orphan Function Audit	Yes.
Duplicate Function Audit	Yes.
Framework Health Check	Yes; output in Section G.
Care Plan Sync Validation	Yes; output in Sections F and G.

Retired Testing Outputs

Retired Output / Behavior	Replacement
Standalone Template Validation Report	Dashboard Quality Section A.
Standalone Test 6 Date Format Report	Dashboard Quality Section C.
Standalone Test 7 Validation Failure Report	Dashboard Quality Section D.
Standalone Test 9 Monthly Change Subheader Report	Dashboard Quality Section E.
Standalone Test 10 Dashboard Audit Report	Dashboard Quality Section F.
Standalone Framework Health Check Report	Dashboard Quality Section G.
Dashboard Quality hidden-template creation	Direct section updates on existing Dashboard Quality Report.
Dashboard Quality full rebuild after all tests	Section I Summary and Section J Timing Summary update only.

20. Performance Standards

Purpose

The Performance Standards ensure that the Master List Framework remains efficient, scalable, maintainable, and responsive as functionality expands.

Performance Review Requirement

- A Performance Review shall be completed before every production release.
- The review shall identify spreadsheet reads, writes, formatting operations, sheet copy operations, data loops, dashboard reads, validation operations, Dashboard Quality writes, Monthly Change operations, and Master List processing operations.

Performance Analysis Categories

Category	Review Requirement
Spreadsheet Reads	Review <code>getValues()</code> , <code>getDisplayValues()</code> , <code>getFormulas()</code> , <code>getBackgrounds()</code> , <code>getFontColors()</code> , <code>getNumberFormats()</code> .
Spreadsheet Writes	Review <code>setValues()</code> , <code>setBackgrounds()</code> , <code>setFontColors()</code> , <code>setNumberFormats()</code> , <code>setColumnWidths()</code> , <code>setWrapStrategies()</code> .
Formatting Operations	Review backgrounds, font colors, font sizes, alignments, wrap settings, borders, merged cells, hidden columns.
Sheet Copy Operations	Review template duplication, monthly sheet creation, archive sheet creation.
Data Processing Loops	Review Demo P, Master List, Banner, Monthly Change, validation, Dashboard Quality, and dashboard loops.
Template Operations	Review template build/refresh and whether monthly processing rebuilds formatting.
Dashboard Operations	Review dashboard reads and caching.
Dashboard Quality Operations	Review section-only writes and eliminate full report rebuilds.
Validation Operations	Review duplicate validation work and centralize header validation.
Monthly Change Operations	Review loop count and repeated reads/writes.
Master List Processing Operations	Review sync, update tracking, CP sync, and Primary PMR writes.

Highest Priority Optimization Rules

Priority	Rule
1	Reduce spreadsheet reads.
2	Reduce spreadsheet writes.
3	Eliminate repeated formatting.
4	Eliminate repeated format verification.
5	Cache dashboard configuration.
6	Reduce participant processing loops.
7	Eliminate Dashboard Quality full rebuilds.
8	Use Template Header Audit instead of repeated process-level header verification.

Runtime Impact Rating

Rating	Use
None	No expected runtime impact.
Low	Minor localized impact.
Medium	Moderate impact or workflow-level change.
High	Significant impact requiring timing validation.

Expected Runtime Change

Classification	Use
Faster	Expected runtime improvement.
Same	No material runtime change expected.
Slower	Expected runtime increase; must include justification and acceptance rationale.

Known v1.4.23 Performance Corrections

Bottleneck / Slow Pattern	Required Correction
Dashboard Quality full rebuild	Remove full rebuild; update only assigned sections.
Dashboard Quality hidden-template creation	Remove as normal QA step.
Framework Health Check erasing report	Write Section G only.
Template validation erasing report	Write Section A only.
Test 9 separate report creation	Write Section E only; do not create/delete standalone sheets.
Demo P Primary PMR verification	Remove; Primary PMR is assigned in Raw Data.
Demo P Banner memory sync	Remove separate memory sync passes.
Disenrolled repeated template rebuild	Clean duplicate template creation and use governed template once.
Repeated formatting in monthly processing	Use template-first formatting and faster v1.4.21-compatible monthly formatting where approved.

20.A Template First Formatting Standard

Purpose

The Template First Formatting Standard ensures that formatting is applied once during template creation and is not repeatedly rebuilt during normal framework processing. The objective is to reduce runtime, eliminate unnecessary formatting operations, and improve overall framework performance.

Template Authority Rule

- Verified templates are the authoritative source of formatting.
- Output sheets shall inherit formatting from verified templates.
- Monthly processing shall not rebuild column widths, colors, fonts, alignment, wrap settings, hidden columns, or filters unless explicitly requested.

Corrected Template Creation Path

For Raw Data, Banner, Care Plan Due, Demo P, and Monthly Change, the corrected template build path is:

Order	Template Creation Step
1	Resize sheet
2	Apply title rows
3	Apply header row
4	Apply alternating color rules
5	Apply data row base style
6	Apply column widths
7	Apply date/number formats
8	Apply hidden/show column settings
9	Create filter
10	Apply row heights
11	Write metadata/signature
12	Ensure frozen rows
13	Ensure frozen columns
14	Ensure tab color
15	Final date/number format enforcement
16	Hide template
17	Complete full template build

Template Path Assignments

Template Group	Required Path
Raw Data	Corrected template creation path; do not use Apply Full Template Formatting as an extra wrapper.
Banner	Corrected template creation path; do not use Apply Full Template Formatting as an extra wrapper.
Care Plan Due	Corrected template creation path; do not use Apply Full Template Formatting as an extra wrapper.
Demo P	Corrected template creation path; do not use Apply Full Template Formatting as an extra wrapper.
Monthly Change	Corrected template creation path; do not use Apply Full Template Formatting as an extra wrapper.
Unlocked Care Plan	Apply Full Template Formatting path permitted.
Master List	Apply Full Template Formatting path permitted.
Disenrolled Exclusion	Apply Full Template Formatting path permitted.
Master List Change Log	Apply Full Template Formatting path permitted.

Removed Template Steps

Removed Step	Reason
Clear sheet/formats for full build	Unnecessary for newly created full template builds.
No existing filter to remove	Not required as a logged template step for new full builds.
Apply full template formatting wrapper for corrected-path templates	Duplicates individually logged formatting steps and creates timing confusion.

Permitted Normal Processing Operations

Operation	Permitted During Normal Monthly Processing
Rename sheet	Yes
Apply filter if missing	Yes
Apply date values if required	Yes
Apply formulas if required	Yes
Apply data values	Yes
Reapply full column widths	No unless explicitly requested
Reapply colors/fonts/alignment/wrap	No unless explicitly requested
Repeated format verification	No during normal monthly processing

Verification Standard

Formatting verification routines shall only run when executing Build Template, Refresh Template, Rebuild Template, Verify Formatting, Framework QA Tests, or Dashboard Validation. Monthly processing shall not automatically verify formatting.

Protected Standard

The Template First Formatting Standard is a protected framework standard. It may not be removed, bypassed, or modified without explicit approval.

20.B Dashboard Processing Standard

Purpose

The Dashboard Processing Standard ensures that dashboard-driven configuration remains efficient and does not become a performance bottleneck. The dashboard serves as a configuration source rather than a participant-processing source.

Dashboard Authority

Dashboard Authority Area	Standard
Sheet definitions	Dashboard controlled.
Header definitions	Dashboard controlled.
Column definitions	Dashboard controlled.
Formatting standards	Dashboard controlled.
Sheet behaviors	Dashboard controlled.
Template configuration	Dashboard controlled.
Processing configuration	Dashboard controlled where applicable.
Dashboard Quality section configuration	Dashboard controlled where applicable.

Dashboard Loading and Caching Rule

- Dashboard configuration shall be loaded once during process initialization whenever practical.
- Loaded configuration shall be reused throughout processing.
- Dashboard configuration shall not be repeatedly read during participant processing loops.
- Dashboard tables should be treated as configuration tables and not participant-processing data sources.

Dashboard Update Triggers

Operation	Dashboard Reads/Writes Allowed
Refresh Dashboard	Yes
Build Template	Yes
Rebuild Template	Yes
Dashboard Validation	Yes
Framework QA Testing	Yes
Monthly Master List processing	Use cached config; avoid repeated dashboard queries.
Demo P processing	Use cached config; avoid repeated dashboard queries.
Care Plan synchronization	Use cached config; avoid repeated dashboard queries.
Dashboard Quality section update	Write assigned sections only.

Protected Standard

The Dashboard Processing Standard is a protected framework standard. It may not be removed, bypassed, or modified without explicit approval.

21. Versioning Standards

Text file names for scripts must always start with v. Versioning standards ensure consistent release tracking, framework governance, testing accountability, and change management throughout the life of the Master List Framework.

Release Type	Format	Use
Major	X.0.0	Major architecture or workflow redesign.
Feature	X.X.0	New functionality, reports, dashboard capabilities.
Bug Fix	X.X.X	Bug fixes, validation fixes, minor improvements.
Population Pass	X.X.X Label	Documentation migration or specification completion pass.

Current v1.9 Production Baseline Standard

Item	Standard
Current production script baseline	v1.4.23
Framework specification target	v1.9
Historical business logic lineage	v26.9.5 + approved v27 workflows
Historical dashboard infrastructure lineage	v3.2.2
Historical QA lineage	v3.4.2

Version Update Requirement

Requirement	Required
Increment version number	Yes
Update version header	Yes
Update release documentation	Yes
Update changelog	Yes
Update known issues / open items	Yes when applicable

Release Documentation Requirement

Release Document Item	Required
Version Number	Yes
Release Date	Yes
Change Summary	Yes
Removed Code Summary	Yes
Helper Audit Summary	Yes
Framework Health Check Summary	Yes
Testing Checklist	Yes
Performance Review Summary	Yes
Known Issues	Yes
Recommended Next Version	Yes

Version History Standard

The framework shall maintain a version history identifying version, release date, summary, major changes, known issues, and status. Version history shall remain part of the framework documentation.

21.1 Framework Update Governance

All approved framework decisions shall be incorporated into the next governing specification revision.

Framework updates shall be cumulative.

Approved governance decisions shall not require recreation from historical specifications once incorporated into the current governing document.

The current governing specification shall be treated as the authoritative framework baseline.

When approved framework decisions affect:

- Architecture
- Processing Logic
- Dashboard Configuration
- Validation Rules
- Template Definitions
- Column Definitions
- Sheet Definitions
- Data Source Mappings
- Synchronization Logic

the governing specification and affected appendices shall be updated accordingly.

Historical framework specifications remain reference documents and shall not override approved governance incorporated into the current governing specification.

21.2 Latest Approved Output Governance

The current governing framework baseline shall be established by:

- Current Governing Specification
- Current Production Baseline

Approved framework artifacts include:

- Framework Specification Documents
- Official Framework Updates
- Framework Addendum Records
- Active Production Scripts
- Formal Architecture Audits
- System Validation Reports
- Performance Timing Reports
- Authorized Data Mapping Updates

When newer approved artifacts are issued:

- Review against the current governing specification.
- Review against the current production baseline.
- Identify governance impacts.
- Identify architecture impacts.
- Identify required specification updates.

Supporting artifacts shall not supersede the governing specification or approved production baseline unless formally approved.

The Master List Framework shall evolve through cumulative governance updates.

21.3 Script Lineage Governance

The framework maintains a strict hierarchical lineage:

- Current Governing Specification
- Current Production Baseline
- Current Approved Production Script
- Current Approved Framework Update

Future development recommendations shall be derived from the newest approved level available.

When a newer approved production script exists:

- Compare against the current production baseline.
- Compare against the governing specification.
- Identify architecture deltas.
- Update future recommendations to align with the newest approved script.

Regression to prior executable versions is prohibited except when explicitly required for regression review or historical audit.

Historical reference scripts remain reference sources and do not override current approved architecture.

21.4 Executable Script Accessibility Governance

The framework mandates the absolute availability of the latest authorized production script in its entirety prior to any modification, architectural optimization, formal audit, logical reconstruction, or version advancement activities.

Validated repositories for executable logic comprise:

- Internal Knowledge Base Repository Files
- Current Authorized Production Script Uploads
- Verified Production Script Archival Lineage
- Exhaustive Script Attachments within Active Sessions

In instances where the definitive production baseline is inaccessible, fragmented, or only partially transparent:

- Prohibit the assumption of internal logic.
- Forbid memory-based logical code reconstruction.
- Avoid inaccurate declarations of comprehensive audit.
- Demand the delivery of exhaustive source files.

Conceptual framework governance reviews remain permissible absent the executable file.

Technical script modifications necessitate total source transparency and availability.

The most recently authorized complete version serves as the definitive executable implementation baseline.

21.5 Knowledge Base Governance

Purpose

The Master List GPT Knowledge Base establishes a formal authority hierarchy and file organization standard to ensure framework integrity and documentation consistency.

Knowledge Base Index

A centralized Knowledge Base Index shall be maintained as the authoritative log. This index must be updated whenever governing framework artifacts, production baselines, executable scripts, update logs, validation reports, timing summaries, mapping documents, or historical lineage files are added, replaced, retired, or renamed.

Knowledge Authority Order

Tier 1 – Governing Authority

- Current Framework Specification
- Current Daily Framework Review Protocol
- Current GPT Instructions

Tier 2 – Active Production Authority

- Current Production Baseline
- Current Approved Production Script

Tier 3 – Active Supporting Artifacts

- Dashboard Quality Reports
- Validation Reports
- Timing Reports
- Mapping Documents
- Framework Update Log

Tier 4 – Historical Reference Artifacts

- Historical Scripts
- Historical Framework Reviews
- Script Archive

Knowledge Naming Standards

The active implementation baseline shall adhere to the following naming convention:

vX.X.X_Current_Approved_Production_Script

The framework update log shall adhere to the following naming convention:

Current_Framework_Update_Log

Historical reference files are preserved for lineage review only and shall not override the current governing authority.

- Release promotion of a Production Candidate to Current Approved Production Script requires explicit approval.

22. Protected Standards

Purpose

Protected Standards identify framework components, behaviors, and architectural requirements that may not be removed, disabled, or modified without explicit approval. Protected standards preserve framework stability, maintainability, testing integrity, and long-term consistency.

Protected Framework Components

Protected Component	v1.9 Status
Framework Dashboard / Dashboard Quality	Protected; Dashboard Quality sections A-J are the consolidated QA output.
Framework QA Tests	Protected.
Template Validation	Protected; writes Section A.
Template Header Audit	Protected; writes Section B.
Dashboard Validation	Protected.
Helper Audit	Protected.
Dependency Audit	Protected.
Orphan Function Audit	Protected.
Duplicate Function Audit	Protected.
Framework Health Check	Protected; writes Section G.
Timing Logs	Protected; summarized in Section J.
Dashboard Configuration	Protected.
Care Plan Sync Validation	Protected; included in Sections F and G.

Protected Behaviors

Protected Behavior	Standard
Freeze Rows 1-4	Protected.
Freeze Columns A:B	Protected.
Header Row 4	Protected.
Data Start Row 5	Protected.
Dashboard-Controlled Formatting	Protected.
Dashboard-Controlled Validation	Protected.
Dashboard-Controlled Column Widths	Protected.
Dashboard-Controlled Date Formats	Protected.
Dashboard-Controlled Hidden Columns	Protected.
Dashboard Quality section-only updates	Protected.
Timestamped Dashboard Quality section headers	Protected.

Protected Architecture

Architecture	Protected Standard
Single File Architecture	Protected during production stabilization.
Primary PMR Row Architecture	Protected.
Master List Primary PMR Rows Only	Protected.
One Pass Processing Architecture	Protected.
Template First Formatting	Protected.
Dashboard Configuration Cache	Protected.
Framework Dashboard / Dashboard Quality Architecture	Protected.
Framework Validation Architecture	Protected.
Framework Testing Architecture	Protected.
Care Plan Sync Architecture	Protected.
Demo P Copy-First / Process-Once Architecture	Protected.
Standalone Disenrolled Architecture	Protected.

Protected Processing Standards

Processing Standard	Protected / Retired Status
Master List Processing Workflow	Protected.
Monthly Change Processing Workflow	Protected.
Banner Processing Workflow	Protected.
Care Plan Processing Workflow	Protected.
Demo P Processing Workflow	Protected with v1.9 copy-first/process-once corrections.
Disenrollment Processing Workflow	Protected as standalone Create Disenrolled List.
Repair Disenrolled List	Retired; shall not be reintroduced without approval.
Demo P Primary PMR reassignment/verification	Retired; Primary PMR assignment occurs in Raw Data.
Dashboard Quality full rebuild	Retired; section-only updates required.
Standalone QA report sheets	Retired; Dashboard Quality sections A-J required.

Protected Data Standards

Data Standard	Protected
Column Configuration Tables	Yes
Sheet Definitions	Yes
Data Source Mapping Tables	Yes
Color Standards	Yes
Naming Standards	Yes
Template Row Counts	Yes
Demo P Update Tracking Columns	Yes
Master List Update Tracking Columns	Yes
Disenrolled Reduced Column Set	Yes

Modification Requirement

Required Documentation	Required for Protected Standard Change
Reason for Change	Yes
Impact Analysis	Yes
Testing Requirements	Yes
Rollback Strategy	Yes
Release Blocking Review	Yes

Release Blocking Rule

If a protected component is missing, disabled, broken, or replaced by retired architecture, the release is blocked.

Protected Standard Review

Protected standards shall be reviewed before every major release to verify compliance.

Purpose of Protection

Goal	Protected Outcome
Framework Consistency	Yes
Framework Stability	Yes
Framework Maintainability	Yes
Framework Testability	Yes
Framework Reliability	Yes
Long-Term Development Integrity	Yes

Appendix A - Column Configuration Table

Appendix A.1 - Required Production Header Additions

Sheet	Required Added Headers	Governance
Demo P	Demo P Update Status; Demo P Update Month; Demo P Source Sheet	Required on Template - Demo P and validated by Template Header Audit.
Master List	Master List Update Status; Master List Update Month; Master List Source Sheet	Required on Master List Primary PMR Rows only.
Dashboard Quality Report	Dashboard Quality Section; Last Run; Status; Duration / Timing where applicable	Required for timestamped Dashboard Quality sections A-J.
Raw Data	Primary PMR Row	Primary PMR ownership is assigned in Raw Data only.

Appendix B - Sheet Definitions

Sheet	Purpose	Primary Sources	Processing/Rules
Raw Data	Authoritative monthly import source and Primary PMR ownership source.	Monthly report import.	Preserve source data. Assign Primary PMR Row here only. Add approved framework-owned columns only.
Master List	Primary operational participant repository.	Demo P, Banner, Care Plan Due, Unlocked CP, processing functions.	Contains Primary PMR Rows only. All synced and script-generated participant-level data belongs on the Primary PMR Row.
Demo P	Monthly participant processing and comparison sheet.	Raw Data plus Banner sync fields and process-generated Demo P tracking fields.	Copy active Raw Data first, process once, write once. Must include Primary PMR Row and Demo P Update Status/Month/Source Sheet. Does not verify or reassign Primary PMR ownership.
Banners	Banner flags source.	Raw Data.	Sync Banner values into Demo P and Master List Primary PMR Row. Monthly formatting follows a faster approved production process.
CP Due Date	Care plan due dates source.	Raw Data.	Sync Enrollment Date, Last Care Plan, Next Care Plan Due, CP Type by Participant Name + Enrollment Date to Master

Sheet	Purpose	Primary Sources	Processing/Rules
			List Participant Name + Capitation Date.
Unlock CP	Unlocked care plan source.	Raw Data.	Sync Participant Name, PMR #, IDT Meeting Date, and Care Plan Start Date by PMR # to Master List Participant PMR#.
Monthly Change	Monthly audit/report output.	Generated by process.	Sections by change type. Primary PMR Row-only changes shall not trigger participant-wide replacement.
Disenrolled Exclusion List	Standalone disenrollment tracker/exclusion source.	Raw Data / approved process.	Create Disenrolled List only. Repair Disenrolled removed. Uses prompted month naming and reduced column set.
Master List Change Log	Audit/change log.	Generated by process.	Hidden system sheet.
Format Dashboard	Formatting and framework control center.	Manual configuration and generated defaults.	Controls templates, reports, validation, timing, Template Header Audit, and Dashboard Quality configuration.
Dashboard Quality Report	Authoritative consolidated QA report.	Generated by framework tests, dashboard audit, and health check.	Sections A-J. Section-only updates with timestamps. No hidden-template creation or final full rebuild.
Timing Report	Performance log.	Generated by process.	Records step and total seconds. Dashboard Quality Section J summarizes timing.

CP Due	CP Due Date	CP Due 05.26
Monthly Change	Monthly Change Report	Monthly Change 05.26
Master List	Master List	Master List 05.26
ML Change Log	Master List Change Log	ML Change Log
Disenrolled	Disenrolled Exclusion List	Disenrolled 05.26
Dashboard Quality Report	Dashboard Quality Report	Dashboard Quality Report
Timing Report	Timing Report	Timing Report

Appendix F - Framework Test Definitions

Framework Test Definitions are corrected for the Dashboard Quality Report architecture. Standalone QA report sheets are retired. Each test writes only its assigned Dashboard Quality section.

Test / Section	Purpose	Pass Criteria
Section A - Template Validation	Verify template presence, row counts, formatting controls, and template configuration.	No template validation failures.
Section B - Template Header Audit	Verify required headers exist on governed templates.	No missing required template headers.
Section C - Test 6 Date Formatting	Verify all date columns apply display format.	Date columns formatted mm/dd/yyyy.
Section D - Test 7 Validation Failure	Report validation failures and issue details.	Validation failures reported without breaking report structure.
Section E - Test 9 Monthly Change Subheaders	Verify Monthly Change section/subheader structure.	No missing Monthly Change subheaders.
Section F - Test 10 Dashboard Audit	Verify dashboard sections/configuration and include CP Sync audit.	No missing dashboard sections/config values; CP Sync audit present.
Section G - Framework Health Check	Verify framework readiness, components, references, dependencies, and CP Sync health.	Framework healthy; no ReferenceErrors.
Section H - Signoff	Provide release signoff/readiness status.	Signoff section populated.
Section I - Summary	Summarize consolidated QA results.	Summary reflects Sections A-H.
Section J - Timing Summary	Summarize current timing report and bottleneck findings.	Timing summary present and current.

Appendix F.1 - Retired Standalone QA Reports

Retired Standalone Report	Replacement
Template Validation Report	Dashboard Quality Section A.
Test 6 Date Format Report	Dashboard Quality Section C.
Test 7 Validation Failure Report	Dashboard Quality Section D.
Test 9 Monthly Change Subheader Report	Dashboard Quality Section E.
Test 10 Dashboard Audit Report	Dashboard Quality Section F.
Framework Health Check Report	Dashboard Quality Section G.
Dashboard Quality hidden-template creation	Removed.
Dashboard Quality full rebuild after testing	Removed. Only Sections I and J update after test sections.

Appendix G - Release Checklist

Release Review Area	Required Checklist
Pre-Release Review	Version Number Updated; Changelog Updated; Release Notes Updated; Framework Specification Alignment Checked.
Code Review	Syntax Review; Brace Balance Review; Parenthesis Balance Review; Bracket Balance Review; Full Script Review.
Reference Review	Menu References Verified; Helper References Verified; Trigger References Verified; Dashboard References Verified; Dashboard Quality References Verified; Validation References Verified; Timing References Verified.
Audit Review	Architecture Audit; Helper Audit; Dependency Audit; Orphan Function Audit; Duplicate Function Audit; Framework Health Check.
Testing Review	Dashboard Quality Sections A-J generated/updated; Template Validation; Template Header Audit; Date Formatting; Validation Failure; Monthly Change Subheaders; Dashboard Audit; Framework Health Check.
Performance Review	Spreadsheet Reads Reviewed; Spreadsheet Writes Reviewed; Formatting Operations Reviewed; Sheet Copy Operations Reviewed; Dashboard Quality Rebuilds Removed; Data Loop Review Completed.
Release Approval Criteria	No ReferenceErrors; No Missing Helpers; No Missing Functions; No Failed Framework Tests; No Failed Health Checks; No Critical Performance Issues.

Appendix H - Required Release Package

Package Area	Required Items
Required Release Information	Version Number; Release Date; Release Type; Author.
Change Documentation	Change Summary; Functions Added; Functions Modified; Functions Removed; Framework Components Updated; Dashboard Components Updated; Dashboard Quality Components Updated; Validation Components Updated; Testing Components Updated.
Code Removal Documentation	Removed Functions; Removed Helpers; Removed Constants; Removed Menus; Removed Legacy Code; Removed Deprecated Components; Removed Retired QA Reports/Repair Disenrolled where applicable.
Audit Documentation	Architecture Audit; Helper Audit Summary; Dependency Audit Summary; Orphan Function Audit Summary; Duplicate Function Audit Summary; Framework Health Check Summary.
Testing Documentation	Tests Executed; Dashboard Quality Section Results; Test Results; Pass Count; Fail Count; Known Issues.
Performance Documentation	Performance Impact; Expected Runtime Change; Performance Review Summary; Optimization Notes; Timing Summary.
Required Deliverables	Full Replacement Script; TXT Download; Release Notes; Testing Summary; Recommended Next Version.
Release Completion Standard	A release is complete only when all required release package components have been provided.

Appendix I - Framework Decision Log

Decision	Status	Reason / Standard	Reference
Single File Architecture	Approved	Simplifies deployment during active development and remains required through production stabilization.	Section 16.D
Dashboard Driven Formatting	Approved	Centralizes formatting configuration through dashboard tables.	Section 7
Dashboard Controlled Templates	Approved	Templates are generated from dashboard configuration and are formatting authority.	Sections 7, 8, 20.A
Template First Formatting	Approved	Formatting is applied during template creation; monthly processing uses verified templates.	Section 20.A
Dashboard Controlled Column Standards	Approved	Column widths, hidden columns, date formats, fonts, and alignments originate from dashboard configuration.	Section 8 and Appendix A
Dashboard Configuration Loaded Once Per Process	Approved	Reduces dashboard reads and participant-loop overhead.	Section 20.B
Verified Templates Are Formatting Authority	Approved	Output sheets inherit formatting from templates; monthly processing does not rebuild formatting.	Section 20.A
Primary PMR Row Architecture	Approved	All participant-level sync data belongs on the Primary PMR Row.	Section 11.1
Master List Primary PMR Rows Only	Approved v1.4.23	Master List now contains Primary PMR Rows only; secondary operational Master List rows are retired.	Sections 11 and Appendix B
Primary PMR Assignment in Raw Data Only	Approved v1.4.23	Primary PMR ownership is assigned in Raw Data and copied downstream; Demo P does not verify/reassign.	Sections 11.1, 14
One Pass Processing Architecture	Approved	Read once, process once, write once whenever practical.	Sections 11.2, 20
Demo P Copy-First / Process-Once Architecture	Approved v1.4.23	Demo P copies Raw Data first, processes once, and writes once; repeated PMR scans removed.	Section 14
Demo P Update Tracking Columns	Approved v1.4.23	Demo P Update Status, Demo P Update Month, Demo P Source Sheet are required.	Appendix A/C
Care Plan Two-Stage Sync	Approved v1.4.23	Unlocked CP sync runs by PMR#; Care Plan Due sync runs by Participant Name + Enrollment Date to Capitation Date.	Sections 13, Appendix C
Dashboard Quality Consolidation	Approved v1.4.23	QA reports are consolidated into Dashboard Quality Sections A-J.	Sections 7, 19, Appendix F
Template Header Audit	Approved v1.4.23	Centralized header audit replaces duplicate header verification inside individual processes.	Sections 8, 19, Appendix F
Remove Dashboard Quality Hidden Template/Rebuild	Approved v1.4.23	Dashboard Quality uses section-only updates and no full rebuild after testing.	Sections 7, 19, Appendix F
Standalone Create Disenrolled List	Approved v1.4.23	Create Disenrolled List is standalone; Repair Disenrolled is retired.	Sections 15, Appendix B/C

Decision	Status	Reason / Standard	Reference
Disenrolled Reduced Column Set	Approved v1.4.23	Contact-detail, banner, phone-label, and Demo P tracking columns removed from Disenrolled requirements.	Appendix C
Full Replacement Production Updates	Approved	Production releases must be complete replacement versions.	Section 16
Testing Recommended After Every Update	Approved	Testing reduces deployment risk during active development.	Section 19
Performance Review Required Before Release	Approved	Performance regressions must be identified before deployment.	Section 20
Protected Standards Enforcement	Approved	Protected standards may not be removed, bypassed, or redesigned without approval.	Section 22

Appendix J - Current Production Status

Status Area	Current v1.9 / v1.4.23 Standard
Framework Status	Production Stabilization.
Current Production Baseline	v1.4.23.
Governing Specification	v1.9 after final assembly.
Historical References	v26.9.5 + approved v27 workflows; Dashboard Infrastructure v3.2.2; QA Framework v3.4.2.
Architecture Status	Single File Architecture; Dashboard Driven Formatting; Template First Formatting; Primary PMR Row Architecture; Master List Primary PMR Rows Only; One Pass Processing; Dashboard Quality Consolidation.
Development Focus	Stabilize v1.4.23; complete v1.9 specification; continue timing optimization for Demo P, Disenrolled, and Dashboard Quality section writes.
Current Priority 1	Validate v1.4.23 against Dashboard Quality A-J.
Current Priority 2	Confirm Template Header Audit against current production headers.
Current Priority 3	Confirm Care Plan Sync validation in Dashboard Audit and Health Check.
Current Priority 4	Continue performance review of Disenrolled and Demo P processing.

Appendix K - Current Open Items

Open Item	Status / Direction
Timing optimization of Demo P processing	Continue monitoring; copy-first/process-once/write-once is the governed architecture.
Timing optimization of Disenrolled write performance	Continue monitoring; use standalone Create Disenrolled List and governed template once.
Dashboard Quality section write timing	Monitor; no hidden-template creation or full rebuild allowed.
Template Header Audit validation	Confirm current headers for Raw Data, Demo P, Master List, Disenrolled, and all templates.
Care Plan Sync validation	Confirm Sections F and G include Unlocked CP and Care Plan Due validation.
Appendix A current production headers	Maintain as production headers evolve.
Future modularization review	Deferred until production stabilization is complete.

Appendix L - Known Performance Findings

Confirmed Slow Operation / Finding	Approved Optimization / Correction
Repeated setColumnWidths()	Template First Formatting; verified templates are formatting authority.
Repeated setBackgrounds()	Template First Formatting; avoid monthly formatting rebuilds.
Repeated setFontSizes()	Template First Formatting; avoid repeated formatting passes.
Repeated format verification	Only run during Build/Refresh/Rebuild/Verify Template, Framework QA Tests, or Dashboard Validation.
Repeated dashboard reads	Dashboard Configuration Cache; load once per process whenever practical.
Repeated getValues()/setValues() cycles	Read once, process once, write once.
Dashboard Quality hidden-template creation	Removed as normal QA step.
Dashboard Quality full rebuild after testing	Removed; section-only updates plus Summary/Timing updates.
Framework Test 9 separate sheet creation/deletion	Removed; Test 9 writes Dashboard Quality Section E only.
Demo P Primary PMR verification scan	Removed; Primary PMR assigned in Raw Data and copied to Demo P.
Demo P Banner memory synchronization pass	Removed; Banner synchronization remains Banner workflow.
Disenrolled repeated template rebuild	Clean duplicate template creation; create from governed template once.
Monthly formatting rebuilds	Use verified templates and faster approved production formatting paths.
